QUICK FACTS

So, what are FloodSax?

FloodSax are an effective lightweight alternative to regular sandbags, which can be used in a range of applications. 100% environmentally friendly and biodegradable, FloodSax tick all the boxes.

How do FloodSax work?

The semi-porous inner liner of a FloodSax sandbag contains hundreds of super absorbent crystals, which upon contact with water absorb up to 90% capacity within 3 minutes. The crystals then retain the water and the bag acts just like a traditional sandbag, keeping water at bay.

Who are FloodSax for?

FloodSax are particularly suited to commercial and residential use, including hospitals, shopping centres and aged and child-care facilities.

FURTHER INFORMATION

Compact

A bag of FloodSax is only a few centimetres thick and weighs just 4 kilograms. Due to their compact nature, FloodSax are easy to store, so you'll be ready for any water related incident that may occur.

Lightweight

A regular sandbag weighs over 10 kilograms! When contrasted with a FloodSax weighing less than a kilogram (before being energised) it's easy to see FloodSax are the obvious choice for the elderly and those unable to manage traditional sandbags.

Ease of Use

Using a traditional sandbag requires many steps: you must get the bags, procure the sand, fill the bags and finally stack to direct water flow. When using FloodSax, you simply open the bag, energise the sack using floodwater, and then stack. FloodSax require less muscle and are a much cleaner alternative to regular sandbags, making them perfect for commercial and residential use, including hospitals, shopping centres and aged and child-care facilities.

Versatility

FloodSax can be used to soak up water, prevent water from entering doorways and also divert floodwater like a regular sandbag.

Speed

A wall of FloodSax can be deployed within minutes, making them the best option for flash flooding and sudden water ingress.

Self-Contained

FloodSax provide a clean, sanitary solution for flood events. Because they do not need to be filled, there is no extra mess made during deployment. After the water has receded or been cleaned up, FloodSax can be taken away leaving no further residue.

Environmentally Friendly

FloodSax are fully biodegradable. After use, they can be buried in the garden allowing the moisture to soak into the ground before decomposing.

Long Lasting

Your new FloodSax have a 5 year shelf life! Order some today. Contact us on 1800 006 099 or at sales@argylece.com.au. We look forward to hearing from you!
